

**INCREASE YIELDS AND IMPROVE PROFITS**

# **PORTABLE GRAIN DRYERS**

**PROVEN & DEPENDABLE™**

[WWW.GRAINSYSTEMS.COM](http://WWW.GRAINSYSTEMS.COM)

# PROVEN & DEPENDABLE

The demands of farming are never-ending. The risks are high. And, at harvest, every second counts. The window of opportunity to harvest at optimal moisture levels for long-term storage and profitability is narrow. At GSI, we help farmers like you take advantage of early harvest to maximize your profitability with efficient, high-capacity grain dryers.

Harvesting early maximizes your grain quality and income potential by reducing the chance that harsh weather conditions will damage stalks or cause eardrop. In comparison to having your crop dry in the field, drying your grain early ensures yield is at its best, with up to 20 percent reductions in dry matter and head shatter loss. Better harvest conditions also means your equipment spends less time in the field, minimizing your cost per acre. Our ultimate goal is to help you improve your bottom line.

Never satisfied with the status quo, for 40 years we have been driven to provide top-of-the-line products that will protect, condition and move the grain you work so hard to produce. We've continued to lead the industry with grain-drying solutions, such as the launch of the first computerized control systems for dryers in 1993, to meet the changing needs of farms and commercial operations across the globe. We offer the widest selection of dependable grain dryers in the industry with technology that makes drying grain as easy and efficient as possible.

As the pioneers in grain conditioning, we've set the industry standard with forward-thinking solutions designed to make you more productive.

Every GSI dryer features a proven, durable design with easy-to-use controls, heavy-duty galvanized construction, powder-coat finish and industrial-grade components to meet the demands of your operation for years to come.

The quality of our products is only matched by our commitment to stand behind them. Every component we design and produce is pretested before installation to ensure your system is running at optimal performance. And we back our claims by independent university and industry testing so you know you have solutions you can count on. We are committed each and every day to provide the best products and service possible. And for over 40 years, our industry experts along with our worldwide network of dealers have provided farming operations with unparalleled expertise and support.

While our commitment to remain at the top runs deep, our commitment to you runs even deeper.

**THAT'S WHY GSI.**

## PORTABLE GRAIN DRYERS

### CHOOSING THE RIGHT PORTABLE DRYER

When drying capacities exceed the ability of a standard in-bin dryer, you can depend on the GSI Portable Dryer lineup to fulfill practically any on-farm drying need. Because every dryer we produce is thoroughly tested throughout the manufacturing process, you can be sure that when it's time for on-farm installation, your dryer will be up and running quickly and efficiently.

Whether you grow corn, soybeans or small grains, GSI single, double or triple module Portable Dryers allow you to start harvesting your grain earlier at higher moisture levels, increasing yields and improving profits. You'll shorten wait time during drying, minimize weather risks, and reduce dry matter and head shatter loss.

At GSI, we have designed our Portable Dryers to provide the capacity you need in a footprint your layout can handle. The single module models can be upgraded to 1,160 BPH at 5-point removal All Heat without changing the layout of the load or discharge equipment. Our stack models can be upgraded to 2,450 BPH at 5-point removal Dry & Cool or 4,000 BPH All Heat (with limited cooling bin size and special management) without changing the footprint or concrete foundation. And because they are scalable, you can begin with a simple system that moves grain by an auger or a more advanced system that incorporates an overhead wet bin, drag conveyors and bucket elevators.

Whatever model you choose, you can depend on GSI's Portable Dryers to offer versatility and efficiency for your operation.

# VISION NETWORK DRYER CONTROLS

## THE INDUSTRY'S MOST ADVANCED DRYER CONTROL SYSTEM

The unique GSI Vision Network Dryer Control system is designed to take the guesswork out of operating your GSI Portable Dryer. Vision provides more dryer performance information than any other control system in the industry. With a quick glance you can see the operating status of the augers, fans and heaters on the large, easy-to-read color touchscreen. On-screen temperature and moisture-based controls let you modify and manage plenum and grain temperatures quickly and easily.

Switching from high/low to on/off fire and other exclusive GSI features, along with many common features, are quick and simple. And, Vision can be easily remote-mounted up to 1,000 feet away from the dryer by using a simple seven-wire harness.

## SYSTEM FEATURES

- 10.4" TFT diagonal color screen with touch screen control
- 32-Bit microprocessor control
- Control comes standard with 13 different language capabilities, including English, Spanish, French, German, Russian, Polish, Portuguese, Dutch, Danish, Bulgarian, Czech, Hungarian and Romanian.
- Plenum temperature manager
- Individual safety monitoring with status displayed on-screen
- All shut-downs logged with time and date
- Safety disconnect on every dryer
- Low voltage safety circuit
- Includes an hour meter

## Moisture Control

Every dryer with GSI Vision is equipped with all the familiar legacy modes of moisture control. Easily select one of the five different modes that best fit your operation's needs, including two of our most common modes:

- **Temperature Based 5-Speed** - This control uses grain temperature to determine the final moisture content. Best for all conditions when grain widely varies, the 5-Speed Mode includes automatic speed averaging so that when moisture changes significantly, all five speeds will change accordingly to bring the operation back into sync with the output moisture.
- **Moisture Based Infinite Speed** - Using the temperature and the two moisture sensors, this system controls the speed infinitely to manage the output moisture of the dryer.

## Electrical Control Features

Each Vision system uses exclusive controls approved by Intertek ETL, a nationally recognized testing laboratory.

- Built to UL 508a and CSA C22.2 No. 14 standards - Certified to U.S. and Canadian electrical requirements
- IEC Branch Breakers - IEC controls are higher quality, rated for more cycles, and meet domestic and international electric codes. All dryers have branch breakers for each motor.
- IEC Motor Overloads - IEC overloads allow a wide range of adjustments to accommodate variances in incoming voltage.
- Auxiliary Auger IEC Contactors/Overloads - Load and unload auxiliary 10 HP motor branch circuits are standard. If load and unload horsepower are specified at time of order, GSI will install up to two larger properly sized breakers, contactors and overloads for your specific application at a reasonable cost.
- Entrelec Terminals - Color-coded Entrelec terminals are used for all computer-control circuit connections, making for easy installation, diagnosis and service.
- Safety Disconnect - Safely disconnects power from main panel for servicing dryer controls, and also provides an easy connection point for incoming electric supply.

**DRYER START-UP MADE EASY**

What used to take 2 to 4 hours can now be done automatically. Simply input the incoming moisture of the grain, desired outgoing moisture and the grain type and hit start. Vision Auto-Start will manage and control the pre-drying of the grain and stage the operation of the dryer – so you don't have to.

**SELECT AUTO-START SETUP  
FROM THE MAIN MENU**

**2**

**SELECT GRAIN TYPE**

**3**

**SELECT INCOMING AND  
OUTGOING MOISTURE**

## REMOTE DRYER CONTROL AND MONITORING

### DRYER CONTROL – SAFELY ACCESSED FROM ANYWHERE

Wherever you are – at home, in the combine or at the local football game – the optional WatchDog™ System lets you take your Vision dryer control with you. Exclusively available at GSI, the smartphone-compatible WatchDog provides you with all the information you need at any time, all from the same Vision interface you use on your dryer unit.

With the exception of starting up the dryer, WatchDog gives you the ability to remotely monitor and safely control dryer functions such as moisture, temperature and dryer status from any web-accessible device with no requirements to download or update an app.

# THE INVERTER ADVANTAGE

## PORTABLE GRAIN DRYERS

### MOVING GRAIN FOR CONSISTENT, EVEN DRYING

To promote even, consistent drying, higher test weights, and to reduce operating costs, add a patented GSI Grain Inverter option to your stack dryer package.

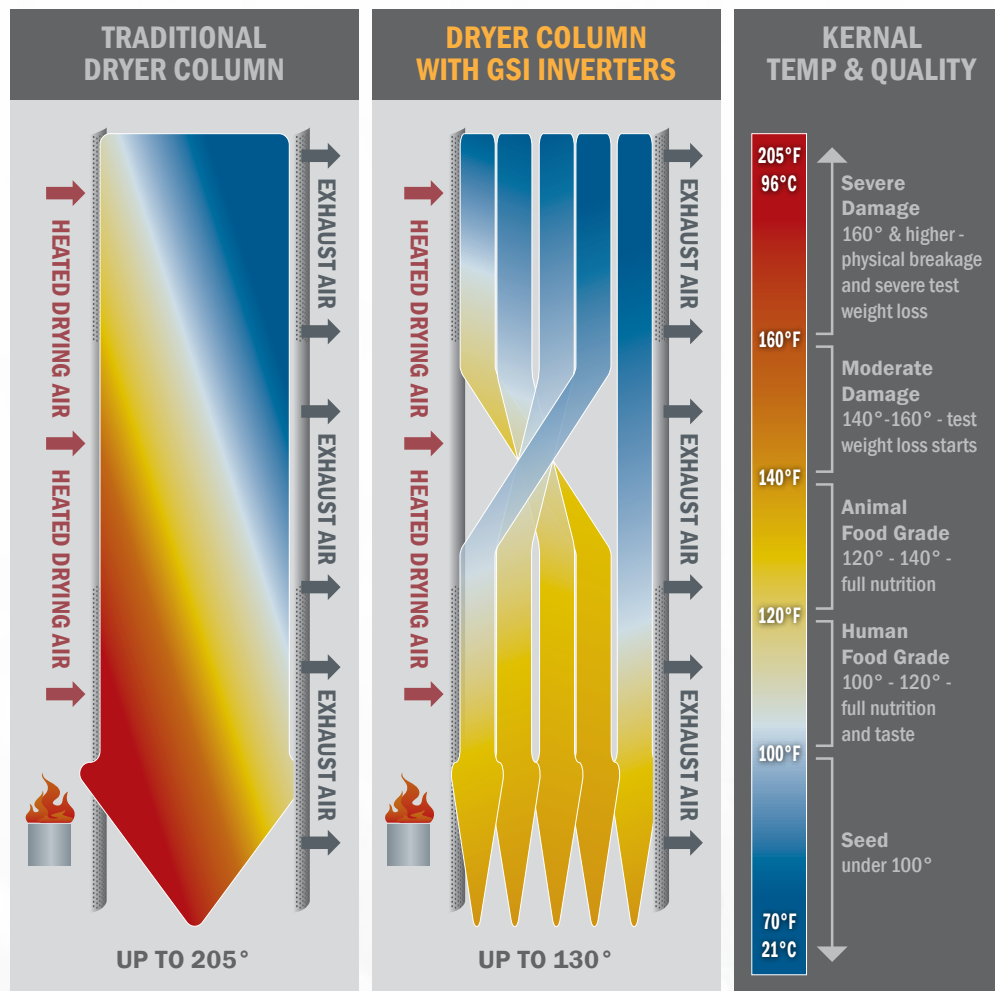

#### How it works

The GSI Grain Inverter redirects the warmest grain from the inside of the column to be next to the wettest grain at the outside of the column, where it is dried by the captured heat which would have otherwise escaped the dryer.

By inverting all but the outside two inches of grain from the outside of the grain column to the inside, this process maintains optimal grain temperature and maximizes grain quality while using less fuel and significantly reducing operating costs.

In addition, the convenient clean-out door makes maintenance quick and easy.

# AC METERING ROLLS & ADJUSTABLE FLOW GATES

## **PROVEN, CONSISTENT UNLOAD**

Meter rolls with AC Variable Frequency Drive (VFD) provide a gentle flow of grain to the auger. Each grain dryer comes equipped with a 4" metering roll. Adjustable gates handle more adverse conditions. When grain quality is poor and debris is present, the adjustable flow gates allow you to customize control of grain volume in each column for more consistent drying. An optional, available upgrade to a 7" meter roll system does not require the use of gates.

Whether using the 4" or 7" metering roll system, this proven design allows material to flow easily, resulting in a smooth transition from your dryer to your handling system.

The AC Metering Motor with VFD allows you to set unload speeds without the need for time-consuming calibration. AC motors are considerably more durable and require limited maintenance.

### STATIC MOISTURE SAMPLER

Take your moisture sample accuracy to a new level with the Static Moisture Sampler. Featuring debris guards to ensure a trash-free, accurate sample, our sampler takes readings only when the grain is static and not flowing. Using GSI's patented discharge auger to ensure that a true cross section of the grain is sampled, a reading is taken once per minute. Based on more accurate moisture readings, your dryer adjusts to provide optimal results. GSI's sampling innovation moves the grain with air with no gear boxes, pulleys, belts or other conventional moving parts. The sampling chamber is blown empty completely cleaning it every cycle.

### HIGH EFFICIENCY BURNERS

Wherever you farm, whatever the weather conditions, GSI's high-efficiency burners are proven to provide even heat and deliver maximum airflow to the dryer's plenum. Single module dryers are equipped with high-quality ASCO valves. MAXON™ gate valves are the primary main gas supply valves on stackable dryers. An electronic ignition system monitors the burner and a view window provides for easy observation of the burner while in operation. Features include, easy-to-adjust vaporizer, large service access door and oil filled gas pressure gauges.

**Exclusive On/Off Fire** - Only available and standard on GSI dryers, On/Off Fire offers a wider range of plenum temperature control down to five degrees above ambient temperature for wheat and other temperature-sensitive grains.

# HEAT, TIME AND AIR: THE PERFECT BALANCE

## **LARGEST GRAIN HOLDING CAPACITY**

Apply excessive heat and you compromise grain quality. Larger grain column holding makes achieving rated drying capacity more likely. Drying grain too fast or too slow with the wrong airflow results in low quality grain and/or decreased efficiency. GSI dryers provide the optimal balance between the heat level, retention time and airflow for best grain quality and efficiency.

## **Even Heat and Grain Quality**

High/Low fire cycling helps to maintain a uniform plenum temperature. The 14" wide columns hold the maximum amount of grain while minimizing the difference from the inside to the outside of the column. Each plenum chamber also has an air-mixing chamber to thoroughly mix the air and heat and to shield the grain columns from infrared damage. Multiple heat zones in two-fan and larger model dryers put the hottest air on the highest moisture grain where a Grain Inverter is not installed.

## **OPTIMIZED AIRFLOW**

In all our dryers the airflow is sized to match the basket to achieve consistent airflow and capacity.

## **Composite Polymer Fan Blades**

More efficient than centrifugal fans, axial fans with composite polymer blades allow for a very low starting load which extends motor life and requires no rebalancing during the life of the dryer.

Additional benefits include high air flow across a wide static pressure range, quiet operation and reduced energy cost

# FEATURES

## PORTABLE GRAIN DRYERS

## LOW-PROFILE, FOLD-UP WET BIN

Perforated wet bin maximizes the pre-heating of grain.

## LEVEL AUGER WITH DURA-EDGE® FLIGHTING

30 percent thicker than regular flighting for longer life. [SEE PAGE 12 FOR MORE INFO.](#)

## TURNBUCKLE BELT TIGHTENER

For easy tensioning and maintenance.

## THREE-PIECE SIDEWALL PANEL SCREENS

Each sidewall panel – top angle, bottom angle and side sections – is available in optional stainless steel to offer long-lasting protection against rust and corrosion.

## GSI'S PROVEN BURNERS

Even heat with maximum airflow. [SEE PAGE 8 FOR MORE INFO.](#)

## AIR MIXING CHAMBERS

Thoroughly mix heat and air before it enters the drying chamber. Mixing vanes eliminate hot spots and create a more uniform plenum temperature.

## DISTRIBUTION BOARD/CIRCUIT BOX

Industrial-grade IEC-rated contactors, breakers and overloads ensure durability and quality while the provided load and unload auxiliary contactors help reduce installation costs.

## CIRCUIT BREAKER

Non-service rated safety disconnect circuit breaker integrated into door handle for safe, economical installation and maintenance.

## COMPOSITE POLYMER FAN BLADES

Industry-best performance in airflow to electrical consumption. [SEE PAGE 9 FOR MORE INFO.](#)

## THE INDUSTRY'S MOST ADVANCED DRYER CONTROL SYSTEM

Vision controls touchscreen display for easier operation. [SEE PAGE 4 FOR MORE INFO.](#)

## ADJUSTABLE FLOW GATES

Allow customized control of grain volume in each column for more consistent drying when grain quality is poor and debris is present. [SEE PAGE 7 FOR MORE INFO.](#)

## MAKE A SMOOTH TRANSITION FROM DRYER TO GRAIN HANDLING EQUIPMENT

Meter roll with AC Variable Frequency Drive (VFD) allows material to flow easily resulting in less clogging. [SEE PAGE 7 FOR MORE INFO.](#)

## DISCHARGE AUGER CLEAN-OUT DOORS

Operated by lever outside of dryer frame, making opening the auger clean-out doors quicker and easier.

## LARGE PLENUM CLEAN-OUT DOORS

Column doors designed to allow for easy access and cleaning out.

# PROVEN DESIGN FOR EASE OF USE

## **NEW! TALLER REAR ACCESS DOOR**

The new 29"x72" access door used on modules with a single fan and 29"x48" used on 60/40 split 2 fan modules greatly improve accessibility and safety when entering the plenum of the dryer. The taller access doors are standard on 1100, 1200, 2300, and 3400 Series Portable Dryers.

## **8" DURA-EDGE® AUGER FLIGHTING**

All GSI augers feature Dura-Edge® 8" diameter flighting with 1/4" ribbon. The Dura-Edge flighting has an outside edge that is 30% thicker than regular flighting. Only GSI augers are double-flighted at the intake end, this proven design is durable for a longer life, increased dependability and ease of maintenance.

## **REAR DISCHARGE AUTO-SHUTDOWN**

Should your takeaway system stop for any reason, the auto-shutdown moves into action to eliminate equipment damage.

The automatic discharge shutdown operates off of a hinged lid switch at the rear 2' discharge extension. Shutdown is activated when grain overfills the discharge auger, which forces the lid open.

## **COLLECT-A-SAMPLE**

The manual "Collect-A-Sample" enables you to sample the same grain that runs across the moisture sensor used to control the dryer. By manually testing the same grain used to control the dryer you are able to get the most accurate reading to ensure your dryer is running to optimum performance.

## **IMPROVED LADDER DESIGN**

The standard ladder package for GSI Portable Dryers has been redesigned to meet the latest OSHA specifications. GSI ladders feature heavy-duty construction and slip-resistant patterns to provide extra grip in wet conditions.

## **PLATFORMS**

Stacked dryers include platform(s) on the upper modules with optional platforms for the bottom module as well as the top and side service platforms.

## PORTABLE GRAIN DRYERS

### X-STREAM™ DRYERS

#### Maximum Efficiency, Unsurpassed Quality

Fans and heaters on most traditional dryers are mounted on the same end of the dryer. The optional X-Stream dryer design features fans and heaters mounted in a staggered configuration on opposite ends of the dryer. With this design, the X-Stream delivers more uniform heat throughout the entire dryer, regardless of column location. The result is a higher quality grain that is more evenly dried at a lower cost and up to a 10 percent gain in efficiency.

#### Unparalleled Performance

For even greater performance and the highest efficiency possible, add the optional GSI Grain Inverters. Combined, the grain inverters and the X-Stream stack dryer design dry grain evenly from front to back and across the entire column without the loss of usable heat. This combination of exclusive GSI features gives you the most efficient portable dryer on the market.

#### NOISE SUPPRESSOR

While most situations do not require the Noise Suppression System, for those who want their dryer to be ultra quiet the optional noise suppressor system will reduce the noise level at 15' to one-fourth the OSHA 8-hour exposure limit – even quieter than the competitive centrifugal fan models.

**Ultra Quiet** - High tech noise absorption material maximizes noise reduction. Reduces decibels at 15' from 93 dB to 82 dB, lowering noise significantly from the original level. Quieter than competitive dryers with centrifugal fans by 3 dB.

**Durable, Long Lasting** - Self-supporting, galvanized and powder coat steel outer construction for long life.

**Ease of Installation, Maintenance** - Easy to install with minimal time and effort. Open top and bottom allows for easy service and maintenance of fans and motors. Retro-fits on all previous GSI and Farm Fans axial fan dryers.

#### HEAT RECLAIMER

On multi-fan dryers, the Heat Reclaimer reduces the amount of heat lost when operating in Dry & Cool mode and recycles it, reducing fuel consumption and lowering operating costs by as much as 30 percent.

Open ductwork is optimally sized for no capacity loss as it prevents accumulation of fine material. Sized to reduce air velocity, very little chaff or air debris is pulled into the dryer.

A Heat Reclaimer can be integrated with GSI's Noise Suppressor System.

# 1100 SERIES

## PORTABLE GRAIN DRYER SPECS

**Configuration:** Single module, single fan & heater with a single plenum. Not expandable.

**Application:** Small- to medium-sized farms using bins 50,000 bushels or less with adequate bin cooling air. Perfect as a first high speed dryer, the 1100 series delivers between 420 to 1,160 BPH All Heat drying at 5-point removal. While primarily an All Heat corn drying system, the 1100 Series dryer can also be used in Continuous Batch Dry & Cool operation full time or for specific situations – putting a dry cone in a flat bottom wet bin, or occasional soybean or wheat drying – to still be able to deliver cooled grain.

## PORTABLE GRAIN DRYER SPECS

**Configuration:** Single module, two fans & heaters each with its own plenum in a 67/33 split. Not expandable.

**Application:** Small- to medium-sized farms that require flexibility in drying options. The 1200 Series is good for corn and many other grains operating in Dry & Cool mode and good for corn or rice operating in All Heat. Its economical design gives between 400 to 730 BPH Dry & Cool and 680 to 1,160 BPH All Heat at 5-point removal. As with all Vision-equipped, multiple fan GSI dryers, the 1200 Series can be operated in any mode – All Heat, Dry & Cool, Continuous Flow or Batch – for maximum flexibility.

# 1200 S & H SERIES

## PORTABLE GRAIN DRYER SPECS

**Configuration:** Single module, two fans and heaters, each with its own plenum in a 50/50 split. S-Series are upgradable with additional modules, while the H-Series is not.

**S-Series Application:** Small, medium or even large farms with plans to expand drying capacity. As the base for a two or three stack dryer, the 1200S Series is ideal for farmers with definite plans to add a second or third module at a later date. On its own, the 1200S design – similar to the 1200H – is good for those farms that need the maximum capacity on single phase and/or primarily run All Heat or can utilize Staged Auto for Dry & Cool operation.

**H-Series Application:** The 1200H is primarily Staged Auto or Batch Dry & Cool for corn and many other grains and can operate with corn or rice in All Heat. Economical design that produces between 570 to 700 BPH Dry & Cool and 1,080 to 1,330 BPH All Heat at 5-point removal.

# 2300 & 2400 SERIES

## PORTABLE GRAIN DRYER SPECS

**2300 Series Configuration:** Two modules, three fans and heaters, one on the upper module and two on the lower module

**2400 Series Configuration:** Two modules, four fans and heaters, two on the upper module and two on the lower module

**Application:** Medium to large farms who want to increase grain drying capacity without increasing the footprint. Primarily continuous Dry & Cool for corn and many other grains or All Heat for corn or rice. (Note: it takes bins no larger than 50,000 bu. to cool corn dried in the All Heat mode at no more than 1,500 BPH capacity for safe cooling and storage without special management.) Economical design delivers 1,000 to 1,840 BPH Dry & Cool and 1,460 to 2,700 BPH All Heat high speed drying at 5-point removal.

# 3400 / 3600 SERIES

## PORTABLE GRAIN DRYER SPECS

**3400 Series Configuration:** Three modules, four fans & heaters, one on the upper and middle module and two on the lower module.

**3600 Series Configuration:** Three modules, six fans & heaters, two each on all three modules.

**Application:** The maximum grain drying capacity in a Portable Dryer unit for large farm operations. Primarily continuous Dry & Cool for corn and many other grains or All Heat for corn or rice. (Note it takes bins no larger than 50,000 bu. to cool corn dried in the All Heat mode at no more than 1,500 BPH capacity for safe cooling and storage without special management.) Economical design delivers 840 to 2,450 BPH Dry & Cool and 1,000 to 4,000 BPH All Heat high speed drying at 5-point removal.

# X-STREAM SERIES

## PORTABLE GRAIN DRYER SPECS

**Configuration:** Various. X-Stream is an optional rearrangement of the fans on various dryers (1200H, 1200S, 2300, 2400, 3400, or 3600 Series).

**Application:** Any size farm that wants to optimize grain drying abilities by drying grain more evenly. Adding the X-Stream Series will even out the heat delivery from front to back of the dryer, improving quality and efficiency. These dryers maintain all the features, benefits and best use criteria of the parent series.

Amp and power info can be found on the previous specification pages, listed under the corresponding standard model numbers less the X.

1 - Capacities listed are wet bushels, for mature unfrozen #2 yellow shelled dent corn at listed moisture content and are estimates based on drying principles, field results and computer simulation. Variance may occur due to grain's physiological factors (kernel size, chemical composition, variety, maturity), excessive fines, adverse weather conditions, etc.

2 - Grain discharged hot from the dryer will result in a final moisture content of 15% after cooling in the bin.

3 - Shortest possible height in ( ).

4 - Minimum: Fan(s) & Dryer Load & Unload motor name plate amperages + 5 for control & VFD load.

Maximum: Fan(s) & Dryer Load & Unload & largest auxiliary motor name plate amperages + 5 for control & VFD load.

5 - Small Grain Screen Perforations (0.055") are available for canola and other small grains.

There will be an approximate 20% reduction in capacity on corn and other large grains.

† - S-Series dryers are upgradable with additional modules, while the H-Series is not.

\* - Limited by Meter Roll maximum capacity.

# COMPLETE YOUR GSI SYSTEM

WWW.GRAINSYSTEMS.COM

## 40-SERIES™ GRAIN BINS

When determining the best system for your operation, we know that what is protected inside the bin is what counts the most. Every product we design, engineer and build is based on this foundation.

## TOPDRY

Grain in the overhead chamber is dried by a large fan and heater then dumped to a holding area below. An aeration fan below captures heat from this previously dried grain, and pushes it upward to help dry the next load. This recycling of heat increases efficiency, which greatly reduces drying costs.

## MATERIAL HANDLING

GSI's material handling line includes bucket elevators, chain conveyors, belt conveyors, bin unloads, and chain loops. Also available are towers, catwalks, and support structures.

## GLOBAL SOLUTIONS. LOCAL SUPPORT.

GSI and GSI Dealers alike share the same passion and commitment to our customers. GSI Dealers understand down time is not an option, construction schedules must be met. From site planning to installation and service, GSI Dealers are the proven partners for your operation. When you buy GSI, you get the quality product of a worldwide leader and the dependable service of your local Dealership.
